Relationship

#### ABSTRACT

The survey discussed in this report was sent to State education agencies (SEA) and focuses primarily on their activities in providing both assistance and direction to local school districts concerning substance abuse education. Tables provide statistical information on: (1) existence of state requirements on substance abuse education, minimum curriculum standards, and teacher certificacion; (2) percent of states with various substance abuse education requirements, and source of requirement; (3) percent of states with a substance abuse education requirement that specify where substance abuse education should fit in the curriculum; (4) percent of states providing various forms of assistance regarding substance abuse education; (5) total, mean number of staff per million students, and mean number of staff per state with full-time or part-time responsibilities concerning substance abuse education; (6) mean expenditures per state and per student by state education agencies for substance abuse education; (7) percent of state education agencies reporting various degrees of coordination with state agencies and private groups; (8) collection of information by state education agencies on the extent of substance abuse among students; and (9) perceptions of SEA officials regarding changes in the last two years in the rate of student substance abuse. A sample copy of the survey instrument is included. (JD)

- Points of view or opinions stated in this document do not necessarily represent official OERI position or policy

State education agencies (SEAs) provide both assistance and direction to local school districts concerning substance abuse education. Three-fourths of all States require substance abuse education, and three-fifths provide minimum curriculum standards for substance abuse education. A majority of States offer technical assistance regarding substance abuse to districts, with the most common areas of assistance being guides to resources, coordination with community groups and agencies, effective program strategies, school policy development, and general information on common legal issues.

These are some of the findings of a spring 1987 survey performed under contract by Westat, Inc., for the Center for Education Statistics (CES), U.S. Department of Education, through its Fast Response Survey System (FRSS).<sup>2</sup> The survey was requested by the Department's Planning and Evaluation Service within the Office of Planning, Budget and Evaluation (OPBE), and is one component of an assessment of current State and local activities concerning substance abuse prevention being conducted by OPBE for a report to Congress. A separate Office of Educational Research and Improvement (OERI) report, "District Efforts in Substance Abuse Education," discusses the results of a corresponding nationwide survey of 700 school districts.

The survey discussed in this report was sent to State education agencies and tocuses primarily on their activities; however, States may also perform substance abuse education activities through other agencies (e.g., all States have alcohol and drug abuse agencies). In fact, SEAs sometimes choose not to carry out a particular action because they do not wish to duplicate an action already performed by a different State agency. For example, one State education agency commented that it does not collect information on the extent of substance

Substance abuse refers to alcohol abuse, drug abuse, or both The definition of "abuse" was not stated in the questionnaire, and may show some valiation among respondents

<sup>&</sup>lt;sup>2</sup>CES's Fast Response Survey System is a special screece that, upon request, quickly obtains nationally representative, policy-relevant data from small surveys to meet the needs of U.S. Department of Education policy officials. This survey was sent to the 50 States and the District of Columbia, and received a 100 percent response rate.

abuse, but that such information is collected by the State alcohol and drug abuse agency. Thus, statements in this report should not be interpreted as explaining the full extent of State activities. One item in the questionnaire, whether States require substance abuse education, does refer to State requirements regardless of the source, but the remaining items refer specifically to SEA activities or perceptions.<sup>3</sup>

# State Requirements for Districts

States were surveyed about their requirements for districts in three areas: offering substance abuse education, setting minimum curriculum standards, and establishing certification requirements for teachers. For the first two of these areas, a majority of States have requirements, while teacher certification requirements are much less common. Seven States have no requirements in these three areas, while unother seven States have requirements in all three (table 1). The most common pattern is to require both substance abuse education and minimum curriculum standards, but not certification (21 States).

Substance Abuse Education. Substance abuse education is required by 39 States (76 percent; table 2). For 31 (79 percent) of these States, it is a legislated mandate, while for an additional 7 (18 percent,, the requirement reflects State Board of Education policy. Substance abuse education requirements are most common in the Northeast, where all States require it, while in the remaining regions 67 to 75 percent of the States have a requirement. States in the Central region least often base a substance abuse education requirement solely on a State Board of Education policy (no States, compared with 17 to 30 percent for the other regions). Also, the Central region is the only region to cite another basis for a substance abuse requirement (the State Board of Adopted Standards).

Instructional Format. Among those States with a requirement, slightly over half specify that substance abuse education be taught in the health curriculum, while 14 States (36 percent) do not specify where it should be taught (table 3). The only other common location for substance abuse education to be required by States is in driver training (senior high school level), with 8 States (21 percent) having such a requirement.

Information on activities of State alcohol and drug abuse agencies may be found in Part 5 of the Report to Congress on the Nature and Effectiveness of Federal, State, and Local Drug Prevention/Education Program, U.S. Department of Education, Office of Planning. Budget and Evaluation, submitted to Congress in October 1987

<sup>4</sup> Some States indicated that both legislation and a State Board of Education policy were bases for their requirement. In these cases, States were counted as basing their requirement on legislation, while the 18 percent reported here are States whose only source for a requirement was State Eoard of Education policy.

These regions are defined in the methodology section. The Northeast, Central, and Southeast regions each have 12 States, and the West has 15 States.

<sup>6</sup> States may require substance abuse education to be offered in more than one location in the curriculum, so these numbers may add to more than 51

The variations in instructional format among States by size and region are not great, and the differences would often disappear with a change in response of one or two States. One exception is that all States in the Southeast with substance abuse education requirements specify the location in the curriculum, while in the other regions 33 to 60 percent of the States with substance abuse education requirements do not specify where substance abuse education should be offered.

Minimum Curriculum Standards. A total of 32 States (63 percent) specified minimum curriculum standards for substance abuse education in 1986-87 (table 2). They were more common in the Southeast (75 percent) than in the Central region (42 percent).

<u>Teacher Certification</u>. A less common area for State mandates concerning substance abuse education is a certification requirement for all teachers. Only 11 States (22 percent) require certification, with a requirement more often found in large States (36 percent) than in small States (12 percent), and in the Central region (42 percent) than in the West (7 percent).

#### State Assistance to Districts

State education agencies often provide assistance on substance abuse education to districts and schools. Depending on the State, such aid includes financial assistance, technical assistance, and statewide curriculum packages.

Financial assistance to districts or schools is provided by 23 States (45 percent; table 4). SEAs in the Northeast and Central regions (67 percent and 58 percent, respectively) are more likely to offer financial assistance than those in the Southeast or West (33 percent and 27 percent).

Most States offer technical assistance, with the most common forms of technical assistance being guides to resources (43 States), coordination with community groups and agencies (41 States), effective program strategies (40 States), school policy development (39 States), and general information on legal issues (38 States). Other forms of technical assistance include advice on specific legal problems (31 States), and enforcement provisions and procedures (28 States). Only services to high risk students (24 States) and program evaluation (23 States) are not provided by a majority of States.

Of the nine types of technical assistance listed on the State questionnaire, States provide an average of six (not shown in tables). Critical components of prevention programs are: school policy development, enforcement provisions and procedures, guides to resources,

Large States are defined as those with 1,000,000 or more elementary and secondary students enrolled in public schools in fall 1985, medium-sized States as having 400,000 - 999,999 enrolled, and small States as having less than 400,000 students enrolled. There are 11 large States, 23 medium-sized States, and 17 small States.

 $<sup>8 \, {</sup>m In}$  this report, "average" refers to the arithmetic mean

effective program strategies, program evaluation, and coordination with community groups and agencies. Fifteen States provide technical assistance in all of these areas (not shown in tables).

Sixteen States (31 percent) have adopted a curriculum package on substance abuse education for use by districts (table 4). Typically, their use is mandatory, but in some cases it is optional. In general, a variety of curriculum packages is in use. Only one package was adopted by more than one State--"Here's Looking at You, II", and its more recent version, "Here's Looking at You, 2000" (not shown in tables). This package has been adopted by five States. States use a variety of different publishers, but often use publications developed by their own or related State agencies. Thus, most States with a package (9 of 16) have at least one publication that has been developed by their own State (not shown in tables).

The adoption of statewide curriculum packages is related to other State activities in substance abuse education. Thus, 75 percent of those States which have a curriculum package also have minimum curriculum standards, while only 57 percent of the remaining States have them (not shown in tables). On the other hand, States with a curriculum package have certification requirements (6 percent) less often than the remaining States (29 percent).

#### State Resources for Substance Abuse Education

Twenty-eight State education agencies (55 percent) have no staff with full-time responsibilities in substance abuse education, and 17 SEAs (33 percent) have no staff with part-time responsibilities (not shown in tables). Five SEAs have no staff with either full-time or part-time responsibilities in substance abuse education. The average number of full-time staff per State is 1.5, which is equivalent to 2.0 full-time staff per million students (table 5). Similarly, the average number of part-time staff per State is 1.2, which is equivalent to 1.5 part-time staff per million students.

Large States tend to use primarily full-time staff (26 full-time staff, as compared with 12 part-time), while small States have roughly equal numbers of full-time and part-time staff (26 and 30, respectively). Full-time staffing is greatest in both total number (39) and number per million students (4.8) in the Northeast, and smallest in the West (6 and 0.5, respectively). On a per student basis, staffing is greatest in the small States, but this is due to their having fewer students, not more staff per State.

State education agencies were also asked how much money they spent in 1986-87 for substance abuse education in terms of salaries and also total program funds (excluding salaries). The data must be taken with caution, however, because 14 States were not able to supply funding information for either salaries or program funds, and another 2 States could provide information on salaries only. Further, some of the States supplying information showed uncertainty about the total amounts. Roughly half of the responding States (18 of 37) have total expenditures on salaries of \$20,000 or below; and 16 of 35 States have total program funds of \$5,000 or below (not shown in tables). The average expenditures per responding State are

The average staff per one million students was calculated by summing the staff and total enrollments across States, and then computing the ratio

\$57,100 for total salaries and \$81,600 for total program funds, or \$78 and \$112 respectively per 1,000 students (table 6). States were asked not to report Federal or State funds sent to local districts, so it is possible that State expenditures are greater than indicated here, but that the funds are sent to local districts. Further, it is likely that funds will be greater in 1987-88, as a result of funds distributed through the Drug Free Schools and Communities Act of 1986.

# Coordination with Other Agencies

In general, State education agencies report having either "extensive" or "moderate" coordination with several State agencies, and lower degrees of coordination with State legal agencies and private groups. The greatest degree of coordination is reported with the State alcohol and drug abuse agency, with 22 SEAs (43 percent) reporting "extensive coordination" and an additional 20 SEAs (39 percent) reporting "moderate coordination" (table 7). A majority of SEAs also report extensive or moderate coordination with the health, mental health, and social service agencies (39 SEAs), and the governor's office (30 SEAs). SEAs report less coordination with State legal agencies, with 22 SEAs (43 percent) showing either moderate or extensive coordination.

SEAs tend to have either limited or moderate involvement with private groups, and extensive coordination is relatively rare. For example, 18 States (35 percent) have moderate coordination with parent groups and 16 (31 percent) have limited coordination, while extensive coordination exists in only 7 States (14 percent). Almost half of the States report limited coordination with business groups and civic groups.

# Extent of Substance Abuse

A total of 20 State education agencies (39 percent) collect information on the extent of substance abuse (table 8). (Some States also collect such information through different State agencies, such as the State alcohol and drug abuse agency.) This information is relatively recent: seven States collected information within the last year, and an additional seven States within the last 2 years (not shown in tables). In all cases, the SEAs included senior high schools in the collection of information, while junior high schools were included by 17 SEAs (85 percent) and elementary schools by eight (40 percent).

States in the Northeast (58 percent) are more likely to collect information than those in the West (20 percent). The collection of information also shows a relationship to staff size. Of States with one or more full-time staff, 41 percent collect information on the extent of substance abuse, as compared with 29 percent of the States with no full-time staff (not shown in tables).

SEA officials also reported on perceived trends in the use of alcohol and drug abuse in their States in the last 2 years. For alcohol, 23 SEA officials (48 percent, based on 48 responding officals) perceive an increase in abuse, 10 (21 percent) perceive a decrease, and 15 (31 percent) report no change (table 9). For drugs, 15 (31 percent) perceive an increase, 21 (44 percent) perceive a decrease, and 12 (25 percent) perceive no change. These judgments are

based on multiple sources, including student surveys (21 States), formal evaluations (9 States), and professional judgment (40 States; not shown in tables).

SEAs in the West (62 percent) are most likely to perceive increases in alcohol abuse, while those in the Central region (36 percent) are least likely. The same pattern is true for drug abuse, except that the number of States reporting an increase is lower: 54 percent in the West perceive an increase in drug abuse, as compared with 9 percent in the Central region.

# Survey Methodology and Data Reliability

In May 1987, questionnaires (see attached) were mailed to the 50 States and the District of Columbia. The survey was a mail survey with telephone followup. The questionnaires were sent to each State's coordinator of alcohol and drug abuse education, who was asked to have it completed by the person most knowledgeable about the State's substance abuse prevention activities. Data collection was completed in June with a response rate of 100 percent.

Because this survey was a census and had a 100 percent response rate, sampling error is not a factor. However, survey estimates are also subject to errors of reporting and errors made in the collection of the data. These errors, called nonsampling errors, can sometimes bias the data. Nonsampling errors are not easy to measure. To do so usually requires that an experiment be conducted as part of the data collection procedures, or that data external to the study be used.

Nonsampling errors may include such things as differences in the respondents' interpretation of the meaning of the questions, differences related to the particular time the survey was conducted, or errors in data preparation. During the design of the survey and survey pretest, an effort was made to check for consistency of interpretation of questions and to eliminate ambiguous items. The questionnaire was reviewed by respondents like those who completed the survey, and the questionnaire and instructions were extensively reviewed by CES, the Committee for Evaluation and Information Systems (CEIS) of the Council of Chief State School Officers, and several other persons concerned with Federal and State policies on substance abuse. Manual and machine editing of the questionnaires was conducted to check the data for accuracy and consistency, and extensive data retrieval was performed on missing or inconsistent items. Thus it appears unlikely that nonsampling errors severely biased the data from this survey.

Data are presented for all States and by the following State characteristics: enrollment size and region.

State enrollment was divided into three size classes (less than 400,000; 400,000 - 999,999; 1,000,000 or more). It was based on the fall 1985 enrollment in public elementary and secondary schools, as reported by the U.S. Department of Education, Center for Statistics, in Digest of Education Statistics, 1985-86.

<sup>10</sup> Responses add to more than 51 because SEA officials were allowed to specify more than one basis for their judgment

Region classifications are those used by the Bureau of Economic Analysis of the U.S. Department of Commerce, the National Assessment of Educational Progress, and the National Education Association. The Northeast includes CT, DE, DC, ME, MD, MA, NH, NJ, NY. PA, RI, and VT. The Central region includes IL, IN, IA, KS, IMI, MN, MO, NE, ND, OH, SD, and WI. The Southeast includes AL, AR, FL, GA, KY, LA, MS, NC, SC, TN, VA, and WV. The West includes AK, AZ, CA, CO, HI, ID, MT, NV, NM, OK, OR, TX, UT, WA, and WY.

The survey was performed under contract with Westat, Inc., using the Fast Response Survey System (FRSS). Westat's Project Director was Elizabeth Farris, and the Survey Manager was Bradford Chaney. Helen Ashwick was the CES Project Officer, and Ralph Lee was the CES Survey Manager. The OPBE data requester, who participated in the design and analyses, was Elizabeth Farquhar. FRSS was established by CES to collect quickly, and with minimum burden on respondents, small quantities of data needed for education planning and policy.

### For More Information

For information about this survey or the Fast Response Survey System, contact Helen Ashwick, Office of Educational Research and Improvement, Center for Education Statistics, 555 New Jersey Avenue, NW., Washington, D.C. 20208, telephone (202) 357-6761. For information about OERI programs and activities, contact Information Services at (800) 424-1616 or, in the metropolitan Washington area, 626-9854.

 $<sup>^{1}</sup>$ The survey was sent to 50 States and the District of Columbia. Some States could not provide expenditure data.

<sup>&</sup>lt;sup>2</sup>Based on States providing the information. Means per 1,000 students were calculated by summing total expenditures and number of staff in each category and then computing the ratio.

 $<sup>^3</sup>Based$  on 35 States providing information on both salaries and program funds.

<sup>&</sup>lt;sup>4</sup>Based on total fall 1985 enrollment in public elementary and secondary schools, as indicated in U.S. Department of Education, Center for Statistics, <u>Digest of Education Statistics</u>, 1985-86.

Table 7.--Percent of State education agencies reporting various degrees of coordination with State agencies and private groups: United States, 1986-87

State agency or group	No coordination	Coordination being planned	Limited coordination	Moderate coordination	Extensive coordinacion
State agencies		·	·		1
State alcohol and drug abuse					
agency	0	4	14	39	43
Governor's office	2	8	31	27	31
Health, mental health,					
& social service agencies	2	4	18	47	29
Legal age.icies	12	8	37	27	16
0밥	0	0	10	38	52
Groups					
Parent groups	10	10	31	35	14
Business groups	20	12	47	16	6
Civic groups	12	10	45	25	8

Note.--Percentages are based on the 50 States and the District of Columbia. Percentages may not add to 100 because of rounding.

Table 8.--Collection of information by State education agencies on the extent of substance abuse among students, by State enrollment and region: United States, 1986-87
